

## Drug-Disease Interaction: Medications and Fall Risk in Older Adults

According to the Centers for Disease Control and Prevention, more than one in four older adults report a fall each year.<sup>1</sup> Falls are a largely preventable problem, with the potential to reduce serious injuries, emergency department visits, hospitalizations, nursing home placements, and functional decline.<sup>2</sup> Over 800,000 patients are hospitalized annually for fall-related injuries, with total medical expenses exceeding \$31 billion.<sup>1</sup>

Certain medications, such as psychoactive drugs, have consistently been associated with increasing risk of falls. If a patient must use a high fall risk medication, it should be used at the minimum effective dose for the shortest possible duration, while monitoring for falls.<sup>2</sup>

An important HEDIS measure assesses the use of medications with the potential to cause harmful drug-disease interactions in patients 65 years and older with a history of fall or hip fracture.<sup>3</sup> The National Committee for Quality Assurance (NCQA) recommends avoiding certain medications that may increase a patient's fall risk. Consider the following alternative therapies in your patients who are 65 years of age and older at risk for falls:

Drug Class	Examples of Medications to Avoid <sup>3*</sup>	Potential Alternatives <sup>4,5</sup>
Anticonvulsants	<ul> <li>carbamazepine</li> <li>divalproex sodium</li> <li>ethosuximide</li> <li>felbamate</li> <li>fosphenytoin</li> <li>gabapentin</li> <li>lamotrigine</li> <li>levetiracetam</li> <li>oxcarbazepine</li> <li>phenobarbital</li> <li>phenytoin</li> <li>pregabalin</li> <li>topiramate</li> <li>valproic acid</li> </ul>	<ul> <li>For new-onset epilepsy: newer agents such as lamotrigine and levetiracetam preferred</li> <li>For neuropathic pain: OTC capsaicin topical or low- dose duloxetine for shortest duration possible</li> <li>For post-herpetic neuralgia: lidocaine patch</li> <li>For diabetic neuropathy: lidocaine patch<sup>*</sup></li> </ul>
Antipsychotics	<ul> <li>aripiprazole</li> <li>brexpiprazole</li> <li>cariprazine</li> <li>clozapine</li> <li>fluphenazine</li> <li>haloperidol</li> <li>lurasidone</li> <li>olanzapine</li> <li>paliperidone</li> <li>quetiapine</li> <li>risperidone</li> <li>ziprasidone</li> </ul>	<ul> <li>For delirium: short term use of antipsychotics should be restricted to those at risk to harm themselves or others</li> <li>For behavioral complications of dementia: low-dose low anticholinergic agents (risperidone, quetiapine) for shortest duration possible can be used after nonpharmacological approaches have failed</li> </ul>
Benzodiazepines	<ul> <li>alprazolam</li> <li>clonazepam</li> <li>diazepam</li> <li>estazolam</li> <li>lorazepam</li> <li>oxazepam</li> <li>temazepam</li> <li>triazolam</li> </ul>	<ul> <li>For anxiety: buspirone, mirtazapine<sup>¥</sup></li> <li>For insomnia: ramelteon, trazodone<sup>¥</sup>, mirtazapine<sup>¥</sup>^</li> </ul>
Nonbenzodiazepine hypnotics	<ul><li>eszopiclone</li><li>zaleplon</li><li>zolpidem</li></ul>	• For insomnia: ramelteon, trazodone <sup>¥</sup> , mirtazapine <sup>¥</sup> ^
Selective Serotonin Reuptake Inhibitors	<ul> <li>citalopram</li> <li>escitalopram</li> <li>fluoxetine</li> <li>fluoxetine</li> <li>sertraline</li> </ul>	<ul> <li>For depression: bupropion, trazodone, mirtazapine</li> <li>For anxiety: buspirone, mirtazapine<sup>¥</sup></li> </ul>
Serotonin-Norepinephrine Reuptake Inhibitors	<ul> <li>desvenlafaxine</li> <li>duloxetine</li> <li>venflaxine</li> </ul>	<ul> <li>For depression: bupropion, trazodone, mirtazapine</li> <li>For anxiety: buspirone, mirtazapine<sup>¥</sup></li> <li>For neuropathic pain: OTC capsaicin topical or low- dose duloxetine for shortest duration possible</li> </ul>
Tricyclic antidepressants	<ul> <li>amitriptyline</li> <li>clomipramine</li> <li>desipramine</li> <li>doxepin (&gt;6mg)</li> <li>imipramine</li> <li>nortriptyline</li> <li>protriptyline</li> </ul>	<ul> <li>For depression: bupropion, trazodone, mirtazapine</li> <li>For neuropathic pain: OTC capsaicin topical or low- dose duloxetine for shortest duration possible</li> </ul>

\*Not a comprehensive list. A full list is available for download at: http://store.ncqa.org/index.php/catalog/product/view/id/3741/s/hedis-2020-ndc \*Off-label; ^For adults with insomnia secondary to comorbid depression or other mood disorders
